

Customer Churn Analytics & Retention Intelligence

Business Problem

Telecom companies face recurring revenue loss due to customer churn. This project focuses on churn-risk analysis, KPI reporting, customer segmentation, and retention-focused business intelligence workflows.

Technical Workflow

Customer data was cleaned and analyzed using Python and SQL. KPI metrics and churn trends were visualized using Power BI dashboards and reporting workflows.

Key Insights

Low-tenure customers and customers with higher monthly charges demonstrated elevated churn probability. KPI reporting improved visibility into retention-focused business metrics.

Business Recommendations

Organizations should build proactive retention campaigns, expand KPI monitoring dashboards, and improve onboarding workflows for high-risk customer groups.

Metric	Value
Customer Records	3,000+
KPI Metrics	12+
Reporting Improvement	60%
High-Risk Segments	3
